

Use Drumclip in 6 easy steps

Pocket size manual

Step 1

Place drums on pallet

Position 4 UN 200 litre (50 gallon) drums on a pallet, ensuring size and quality.

Step 2

Place Drumclips

Visually inspect first. Then place 2 Drumclips on the drums. 1 on each side. Position at outer edge of drums facing outward.

Step 3

Add vertical strap

Apply and secure a vertical strap over the Drumclips and under the pallet

Step 4

Apply horizontal strap

Secure a strap tightly in the middle of the drums using certified straps. Signode, Cordstrap or comparable.

Step 5

Load pallets intro trailer

Use a forklift. Put the skids on non-slip mats in a flatbed trailer, with the Drumclips positioned on the outer edge.

Step 6

Secure load to trailer

Use a tension strap, ensuring it's not twisted, and secure pallets to the vehicle with an (Ergo) ratchet strap.

About us

We are Drumclip

Safer drum transport

Drumclip is the innovative, award-winning solution to secure 200L drums. A better way to reduce risk, cut waste, and support smoother logistics. Certified for road, rail, and sea.

Reusable for 2 years, made from recycled materials, and produced in the Netherlands with 100% wind energy.

A small investment with Drumclip supports day-to-day efficiency and long-term responsibility without compromise.

Drumclip® is a registered trademark of Invago B.V.

Drumclip is designed, engineered and made in the Netherlands
using 100% certified renewable wind energy.
