Use Drumclip in 6 easy steps

Pocket size edition

Step 1

Place drums on pallet

Position 4 UN 200 litre (50 gallon) drums on a pallet, ensuring size and quality.

Step 2

Place Drumclips

Visually inspect first. Then place 2 Drumclips on the drums. 1 on each side. Position at outer edge of drums facing outward.

Step 3

Apply horizontal strap

Secure a strap tightly in the middle of the drums using certified straps. Signode, Cordstrap or comparable.

Step 4

Add vertical strap

Apply and secure a vertical strap over the Drumclips and under the pallet.

Step 5

Load pallets into trailer

Use a forklift. Put the skids on non-slip mats in a flatbed trailer, with the Drumclips positioned on the outer edge.

Step 6

Secure load to trailer

Use a tension strap to fasten the load. Make sure it's not twisted. Secure the pallets to the vehicle with an (Ergo) ratchet strap.

About us

We are Drumclip

Safer drum transport

We are a growing international team with a diverse and global presence.

Using 100% certified wind energy, we produce reliable, high-quality solutions for drums on pallets.

Designed and manufactured in the Netherlands, with a focus on the operator and workplace.

We are committed to our customers, communities, and the planet, working towards a safer, more sustainable future.
